

Frontend Application using SvelteKit - Marking Rubric (30 marks)

Design Phase (5 marks)

Wireframes (5 marks)

Band	Marks	Criteria
A	4-5	Professional wireframes created using digital tool showing all six required pages. Each wireframe includes all required elements: page title, navigation, key components with clear placement, form fields and buttons, data display areas and responsive layout considerations. Wireframes are clear, detailed and provide excellent blueprint for implementation.
B	3.2-3.9	Good wireframes covering all six pages with most required elements present. Generally clear layout and component placement. Responsive considerations included. Minor details missing but overall provides good guidance for implementation.
C	2.5-3.1	Basic wireframes present for six pages but missing some required elements or details. Layout and components shown but may lack clarity. Responsive considerations minimal or unclear. Provides adequate but incomplete guidance for implementation.
D/E	0-2.4	Incomplete wireframes or very poorly designed. Missing key elements, unclear layouts, or difficult to understand. Does not provide adequate guidance for implementation.

Development Phase (18 marks)

Project Management (2 marks)

Band	Marks	Criteria
A	1.6-2	Excellent continuation of agile methodology from backend. Frontend tasks well-integrated into existing GitHub Project. Issues clearly defined with appropriate labels. Tasks coordinated effectively with backend work. Systematic tracking through project columns. Demonstrates strong understanding of full-stack project management.
B	1.3-1.5	Good project management with frontend tasks added to GitHub Project. Most tasks tracked as issues. Generally coordinated with backend. Shows understanding of agile methodology with minor organisational issues.
C	1-1.2	Basic project management. Some frontend tasks tracked but inconsistent. Limited coordination with backend tasks. Shows basic understanding of agile methodology but implementation could be improved.

Band	Marks	Criteria
D/E	0-0.9	Poor project management. Frontend tasks not properly tracked or integrated. No clear coordination with backend. Little evidence of agile methodology in frontend development.

Pages and Routing (4 marks)

Band	Marks	Criteria
A	3.2-4	All eight required pages implemented and fully functional: Home page is well-designed with clear purpose and navigation. Login and register pages have proper form fields, validation feedback and error handling following best practices. Dashboard provides clear overview with intuitive navigation and excellent information architecture. List pages for at least two models display data clearly in appropriate format with proper loading and error states. Detail pages for at least two models show complete record information with good layout and UX. Create/edit form pages for at least two models handle all fields with validation, providing clear success/error feedback and supporting both create and edit operations. 404 error page is professional with clear messaging and navigation options. All pages follow design principles, are responsive and provide excellent user experience.
B	2.6-3.1	Eight pages implemented with most functional. Home, login, register and dashboard pages work well with minor design or usability issues. List pages for two models display data effectively with basic state handling and general responsiveness. Detail pages show data with minor display issues. Create/edit forms handle operations with basic validation and feedback. 404 page is functional with adequate design. Generally good implementation with some areas needing improvement.
C	2-2.5	Eight pages present but several lack polish or have usability issues. Authentication pages work but have limited validation feedback. Dashboard lacks clarity or good organisation. List pages may have display or responsiveness issues. Detail pages have limited state handling. Forms may not fully support both create and edit operations or have validation issues. 404 page has minimal functionality. Adequate implementation but significant room for improvement.
D/E	0-1.9	Fewer than eight pages implemented or pages have major functionality issues. Missing key pages or pages are non-functional. Authentication pages broken or missing key features. Dashboard does not provide meaningful overview. List or detail pages missing for required models or poorly implemented. Forms do not properly handle create/edit operations. 404 page missing or ineffective. Poor overall implementation.

Components (4 marks)

Band	Marks	Criteria
------	-------	----------

Band	Marks	Criteria
A	3.2-4	Eight or more well-designed, truly reusable components implemented: Navigation, Form inputs, Table/List, Modal/Dialog, Loading indicator, Alert, Card, plus at least one additional custom component. All components are properly abstracted with appropriate props. Components are used effectively across multiple pages. Clean, maintainable code. Excellent component design demonstrating strong understanding of component-based architecture.
B	2.6-3.1	Good implementation of eight components with most being reusable. Components have appropriate props and are used across pages. Minor issues with reusability or prop design. Generally clean code with some areas for improvement.
C	2-2.5	Basic implementation of eight components but limited reusability. Some components may be too specific or not properly abstracted. Props may not be well-designed. Components exist but could be significantly improved.
D/E	0-1.9	Fewer than eight components or components are poorly designed. Little to no reusability. Components not properly abstracted or used. Poor understanding of component-based architecture.

API Integration (4 marks)

Authentication (1 mark)

Band	Marks	Criteria
A	0.8-1	Excellent authentication integration. Register, login and logout fully functional and integrated with backend API. Proper token management and storage. Good error handling. Seamless user experience.
B	0.7	Good authentication integration with all functions working. Basic token management. Minor issues with error handling or UX.
C	0.5-0.6	Basic authentication working but with issues. Token management present but may have problems. Limited error handling.
D/E	0-0.4	Authentication integration broken or incomplete. Token management not working properly. Poor error handling.

Data Display for All Six Models (1 mark)

Band	Marks	Criteria
A	0.8-1	Excellent integration fetching and displaying data from all six backend models. Data properly formatted and displayed. Good loading and error states. Efficient API calls.
B	0.7	Good data fetching for all models with minor display or state handling issues. Generally efficient API usage.

Band	Marks	Criteria
C	0.5-0.6	Basic data fetching from models but some may be incomplete or have issues. Limited state handling.
D/E	0-0.4	Data fetching missing for some models or poorly implemented. Does not properly display data from all six models.

CRUD Operations for All Six Models (1 mark)

Band	Marks	Criteria
A	0.8-1	Excellent implementation of create, update and delete operations for all six models. All operations fully functional with proper API integration. Good feedback and error handling. UI updates appropriately after operations.
B	0.7	Good CRUD implementation for all models with minor issues. Most operations work correctly with basic feedback.
C	0.5-0.6	Basic CRUD present for all models but some operations may be incomplete or buggy. Limited feedback or error handling.
D/E	0-0.4	CRUD operations missing for some models or poorly implemented. Operations don't work correctly or lack proper integration.

Error Handling and Token Management (1 mark)

Band	Marks	Criteria
A	0.8-1	Excellent error handling for all API requests with meaningful user messages. Proper HTTP status code handling. Secure token storage and management. Tokens properly sent with authenticated requests. Automatic logout on token expiration.
B	0.7	Good error handling with meaningful messages for most scenarios. Token management functional with minor issues. Generally handles auth states correctly.
C	0.5-0.6	Basic error handling present but could be more comprehensive or user-friendly. Token management works but may have issues. Limited status code handling.
D/E	0-0.4	Poor or missing error handling. Generic or unhelpful error messages. Token management broken or insecure. Does not properly handle auth states.

Form Handling and Validation (2 marks)

Band	Marks	Criteria
A	1.6-2	Excellent client-side validation matching all backend rules. Validation runs in real-time providing immediate feedback. Error messages are clear, specific and helpful. Loading states during submission with disabled buttons. Success messages displayed appropriately. Form clears or redirects after successful submission. Professional user experience.

Band	Marks	Criteria
B	1.3-1.5	Good validation matching most backend rules. Clear error display with basic feedback. Loading states present during submission. Generally good user experience with minor issues.
C	1-1.2	Basic validation present but may not fully match backend rules. Some error feedback provided. Limited loading states or user feedback during submission. Adequate but could be significantly improved.
D/E	0-0.9	Poor or missing validation. Does not match backend rules. Unclear or missing error messages. No loading states or feedback during submission. Poor user experience.

Deployment (2 marks)

Band	Marks	Criteria
A	1.6-2	Application successfully deployed to hosting platform and fully functional. All pages and features work correctly in production. Proper environment configuration. Good performance. Comprehensive testing performed with documentation of testing process. Production URL accessible and stable.
B	1.3-1.5	Application deployed and mostly functional. Most features work with minor issues. Environment configured. Basic testing performed. Production URL accessible.
C	1-1.2	Application deployed but has functional or performance issues. Configuration problems present. Limited testing performed. Production URL may be unstable.
D/E	0-0.9	Application not properly deployed or largely non-functional in production. Poor configuration. Little or no testing performed. Production URL not accessible or broken.

Code Quality and Best Practices (7 marks)

Code Organisation (2 marks)

Band	Marks	Criteria
A	1.6-2	Excellent project structure following Svelte/SvelteKit conventions perfectly. Components, pages and utilities organised in logical, appropriate directories. Routes structure clear and well-organised. Components are focused and single-purpose. Layouts properly utilised. Easy to navigate and maintain. Follows industry best practices.
B	1.3-1.5	Good project structure mostly following Svelte/SvelteKit conventions. Clear organisation with minor issues. Components generally focused and appropriately placed. Easy to navigate with some areas that could be improved.
C	1-1.2	Basic Svelte/SvelteKit structure present but inconsistent organisation. Some components or pages misplaced. Mixed purposes in some components. Organisation could be significantly improved.

Band	Marks	Criteria
D/E	0-0.9	Poor project structure not following Svelte/SvelteKit conventions. Disorganised files and components. Components not properly separated by purpose. Difficult to navigate or maintain.

Code Style and Formatting (1 mark)

Band	Marks	Criteria
A	0.8-1	Code consistently linted with ESLint and formatted with Prettier. Strictly follows Svelte/SvelteKit naming conventions. All variables, functions and components have clear, descriptive, meaningful names. No linting errors. Code is highly readable and maintainable. Consistent code style throughout.
B	0.7	Code linted and formatted with minor inconsistencies. Generally follows Svelte/SvelteKit naming conventions. Most names are meaningful and descriptive. Few linting errors. Code is readable with some minor style issues.
C	0.5-0.6	Basic linting and formatting present but inconsistent. Naming conventions partially followed. Some names unclear or non-descriptive. Multiple linting errors. Readability could be improved.
D/E	0-0.4	Little or no linting/formatting. Poor adherence to Svelte/SvelteKit conventions. Components and variables have unclear names. Many linting errors. Code is difficult to read or maintain.

Component Design (2 marks)

Band	Marks	Criteria
A	1.6-2	Excellent component design with true reusability across multiple pages. Props used expertly to make components flexible and configurable. No code duplication - common functionality properly extracted into shared components. Components follow single responsibility principle. Clean, maintainable and follows Svelte/SvelteKit best practices.
B	1.3-1.5	Good component design with reusability across pages. Props used effectively with minor issues. Minimal code duplication with most common functionality extracted. Generally follows best practices.
C	1-1.2	Basic component design with limited reusability. Props used but not always effectively. Some code duplication present. Could better extract common functionality. Shows understanding but needs improvement.
D/E	0-0.9	Poor component design with little reusability. Props poorly used or not used. Significant code duplication. Common functionality not extracted. Does not follow best practices.

Error Handling and User Feedback (1 mark)

Band	Marks	Criteria
A	0.8-1	Excellent error handling throughout application. All API errors caught and displayed with meaningful, user-friendly messages. Clear feedback for all user actions (success messages, error messages, loading states). Error boundaries implemented to prevent crashes. Users always know what's happening and what went wrong. Professional user experience.
B	0.7	Good error handling covering most scenarios. Meaningful error messages displayed. Clear feedback for most user actions. Basic error prevention. Generally good user experience with minor gaps.
C	0.5-0.6	Basic error handling present but incomplete. Some errors not caught or displayed generically. Limited feedback for user actions. Some error states not handled. User experience could be significantly improved.
D/E	0-0.4	Poor or missing error handling. Errors cause crashes or display technical messages. Little to no user feedback. Poor user experience when things go wrong.

Documentation (1 mark)

Band	Marks	Criteria
A	0.8-1	Comprehensive, well-written frontend-documentation.md file. Includes clear project description and purpose, detailed installation and setup instructions, complete environment variable configuration with examples, clear instructions for running in development and working deployment URL. Documentation is professional, well-formatted and easy to follow. New developer could set up and run application from documentation alone.
B	0.7	Good documentation covering all required areas. Instructions are clear and mostly complete. Environment variables documented. Some details may be missing but documentation is usable and helpful.
C	0.5-0.6	Basic documentation present but incomplete or unclear in some areas. Missing some details or instructions. Environment variables listed but not well explained. Would be difficult to set up from documentation alone.
D/E	0-0.4	Poor or missing documentation. Does not cover required areas. Instructions unclear or incomplete. Difficult or impossible to set up and run application from provided documentation.
