

College of Engineering, Construction and Living Sciences

Bachelor of Information Technology

ID607001: Introductory Application Development Concepts

Level 6, Credits 15

Project

Assessment Overview

In this **individual** assessment, you will develop a **REST API** using **Express** and **Node.js**, and deploy it as a **web service** on **Render**. In **development** and **testing**, your data will be stored in a **PostgreSQL** database on **Docker** and in **production**, your data will be stored in a **PostgreSQL** database on **Render**.

As you develop your **REST API**, you will need to write **API tests** to verify the functionality of your **REST API** using **Chai** and **Mocha**.

For marking purposes, provide a video demonstrating the functionality of your **REST API** and the **API tests**.

Marks will also be given for code quality and best practices, documentation and **Git** usage.

Learning Outcome

At the successful completion of this course, learners will be able to:

1. Design and build secure applications with dynamic database functionality following an appropriate software development methodology.

Assessments

Assessment	Weighting	Due Date	Learning Outcome
Practical	20%	Thursday of Week 16 at 2.59 PM	1
Project	80%	Monday of Week 15 at 7.59 AM	1

Conditions of Assessment

You will complete this assessment mostly during your learner-managed time. However, there will be time during class to discuss the requirements and your progress on this assessment. This assessment will need to be completed by **Monday of Week 15 at 7.59 AM**.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** across all assessments in **ID607001: Introductory Application Development Concepts**.

Submission

You **must** submit all application files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – <https://classroom.github.com/a/WBzw8fEH>. If you do not have not one, create a **.gitignore** and add the ignored files in this resource - <https://raw.githubusercontent.com/github/gitignore/main/Node.gitignore>. Create a branch called **project**. The latest application files in the **project** branch will be used to mark against the **Functionality** criterion. Please test before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using an **AI generative tool**. You need to demonstrate to the course lecturer that you can meet the learning outcome for this assessment.

Learning to use AI tool is an important skill. While AI tools are powerful, you **must** be aware of the following:

- If you provide an AI tool with a prompt that is not refined enough, it may generate a not-so-useful response
- Do not trust the AI tool's responses blindly. You **must** still use your judgement and may need to do additional research to determine if the response is correct
- Acknowledge what AI tool you have used. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the AI tool and how you used the response(s) to help you with your work

It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of **zero** for this assessment.

Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic | Te Pūkenga** policies. Learners can view policies on the **Otago Polytechnic | Te Pūkenga** website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

Extensions

Familiarise yourself with the assessment due date. Extensions will **only** be granted if you are unable to complete the assessment by the due date because of **unforeseen circumstances outside your control**. The length of the extension granted will depend on the circumstances and **must** be negotiated with the course lecturer before the assessment due date. A medical certificate or support letter may be needed. Extensions will not be granted on the due date and for poor time management or pressure of other assessments.

Resits

Resits and reassessments are not applicable in **ID607001: Introductory Application Development Concepts**.

Instructions

Functionality - Learning Outcome 1 (50%)

- Models (10%)
 - Ten models. Each model must have at least five fields.
 - A range of data types, i.e., Int, String, Boolean, etc.
 - Five relationships between models, i.e., one-to-one, one-to-many, many-to-many, etc.
 - Three enums. Each enum must have at least three values.
- Authentication and Role-Based Access Control (10%)
 - Three roles, i.e., **SUPER_ADMIN**, **ADMIN** and **NORMAL**.
 - Register a **NORMAL** user.
 - All users can login.
 - Lock a user for ten minutes after five failed login attempts.
 - All users can logout. When a user logs out, the user's token is blacklisted.
- CRUD Operations (10%)
 - A **repository**, **controller** and **route** file for each **model**. Each **controller** file needs to contain operations for **POST**, **GET all**, **GET one**, **PUT** and **DELETE**.
 - When performing a **POST** and **PUT** request, validate the request body. Each field must have four validation rules.
 -
 - **Filter** and **sort** your data using **query parameters**. All **fields** must be filterable and sortable (in ascending and descending order).
 - **Paginate** your data using **query parameters**. The default number of data per page is 10.
- Seeding and API Tests (10%)
- Logging and Security (5%)
- Development, Testing and Production (5%)

Code Quality and Best Practices - Learning Outcome 1 (45%)

- A **Node.js** **.gitignore** file is used.
- Environment variables' key is stored in the **.env.example** file.
- Appropriate naming of files, variables, functions and resource groups.
 - API endpoints are versioned, i.e., **/api/v1**.
 - Resource groups are named with a plural noun instead of a noun or verb, i.e., **/api/v1/items** not **/api/v1/item**.
- Idiomatic use of control flow, data structures and in-built functions.
- Efficient algorithmic approach.
- Sufficient modularity.
- Each file has a **JSDoc** header comment located at the top of the file.
- Code is formatted.
- No dead or unused code.

Documentation and Git Usage - Learning Outcome 1 (5%)

- A **GitHub** project board or issues to help you organise and prioritise your development work. The course lecturer needs to see consistent use of the **GitHub** project board or issues for the duration of the assessment. **Note:** If you cannot create a **GitHub** project board, please use **GitHub** issues.
- Provide the following in your repository **README.md** file:
 - A URL to your **REST API** as a **web service** on **Render**.
 - How do you setup the environments, i.e., after the repository is cloned?
 - How do you run your **REST API** locally?
 - How do you create and apply a migration?
 - How do you reset the **PostgreSQL** database?
 - How do you seed **ADMIN** and **BASIC** users?
 - How do you open **Prisma Studio**?
 - How do you check your code?
 - How do you format your code?
 - ERD of both **REST API**.

Note: You can find a **README.md** template in the **assessments** directory on **GitHub**.

- Use of **Markdown**, i.e., headings, bold text, code blocks, etc.
- Correct spelling and grammar.
- Your **Git commit messages** should:
 - Reflect the context of each functional requirement change.
 - Be formatted using an appropriate naming convention style.

Additional Information

- Your choice **REST API** must be signed off by the course lecturer before you start your development work.
- **Do not** rewrite your **Git** history. It is important that the course lecturer can see how you worked on your assessment over time.
- You need to show the course lecturer the initial **GitHub** project board or issues before you start your development work. Following this, you need to show the course lecturer your **GitHub** project board or issues at the end of each week.
