

College of Engineering, Construction and Living Sciences
Bachelor of Information Technology
ID607001: Introductory Application Development Concepts
Level 6, Credits 15
Practical

Assessment Overview

In this **individual** assessment, you will provide two short reports that will support you in the development of your web applications for the **Project** assessment.

Learning Outcome

At the successful completion of this course, learners will be able to:

1. Design and build secure applications with dynamic database functionality following an appropriate software development methodology.

Assessments

Assessment	Weighting	Due Date	Learning Outcome
Practical	20%	Sunday 7th September at 11.59 PM	1
Project	80%	Sunday 9th November at 11.59 PM	1

Conditions of Assessment

You will complete this assessment mostly during your learner-managed time. However, there will be time during class to discuss the requirements and your progress on this assessment. This assessment will need to be completed by **Sunday 7th September at 11.59 PM**.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** across all assessments in **ID607001: Introductory Application Development Concepts**.

Submission

You **must** submit all files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – https://classroom.github.com/a/8sCyquQ_. If you do not have not one, create a **.gitignore** and add the ignored files in this resource - <https://raw.githubusercontent.com/github/gitignore/main/Node.gitignore>.

Create a branch called **practical**. The latest files in the **practical** branch will be used to mark against the marking rubric. Please test before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **12.00 AM**.

Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using AI tools. You need to demonstrate to the course lecturer that you can meet the learning outcome for this assessment.

Learning to use AI tools is an important skill. While AI tools are powerful, you **must** be aware of the following:

- If you provide an AI tool with a prompt that is not refined enough, it may generate a not-so-useful response
- Do not trust the AI tool's responses blindly. You **must** still use your judgement and may need to do additional research to determine if the response is correct
- Acknowledge what AI tool you have used. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the AI tool and how you used the response(s) to help you with your work

It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of **zero** for this assessment.

Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic** policies. Learners can view policies on the **Otago Polytechnic** website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

Extensions

Familiarise yourself with the assessment due date. Extensions will **only** be granted if you are unable to complete the assessment by the due date because of **unforeseen circumstances outside your control**. The length of

the extension granted will depend on the circumstances and **must** be negotiated with the course lecturer before the assessment due date. A medical certificate or support letter may be needed. Extensions will not be granted on the due date and for poor time management or pressure of other assessments.

Resits

Resits and reassessments are not applicable in **ID607001: Introductory Application Development Concepts**.

Instructions

Note: Please read the **Project** instructions before starting this assessment.

System Design - Learning Outcome 1 (10%)

- Write a short report (500-1000 words) covering the system design for each application, including:
 - Application architecture and main components.
 - Entity Relationship Diagram (ERD) of your database.
 - How data is managed.
 - API endpoints for each model including HTTP methods and routes.
 - Key design choices regarding scalability, maintainability and performance.

UI Design - Learning Outcome 1 (10%)

- Write a short report (500-1000 words) covering the UI design for each application, including:
 - Responsive design for different screen sizes.
 - UI/UX decisions, including navigation, interactions and usability.
 - Wireframes or mockups for key screens showing layout and navigation.

Please submit the reports as either **.pdf** or **.docx** files in the root of your repository.
